CS 7200

Your ideal digital chairside companion

The advantages at a glance

- Compact and quiet system, ideal for the chairside use
- Affordable system with no compromise on image quality
- Fast, streamlined workflow with no click
- For daily intraoral indications (plate size 0, 1, 2)

The best of both worlds

Film and digital imaging

- Familiar, film-like workflow
 - Thin, flexible plates with no cable
 - Easy to position plates even for back molars
 - Plates available in same sizes as film
 - Minimal learning curve
 - Leverage existing x-ray unit and positioners
- With all the advantages of digital
 - Fast and accurate results
 - Eliminates darkroom and chemicals
 - Durable and reusable plates
 - Powerful image analysis tools
 - Easy to share and store images
 - Improves patient communication

Simple 3 step workflow

Expose, scan, view

- Workflow is simplified to the maximum
- Image acquisition is done directly within the imaging software
- No need to click in the software prior scanning plate

1 Patient image is captured onto the plate.

2 Plate is scanned and erased in one step. The plate is ready for reuse.

3 Image appears within seconds, no click required

Ideal for chairside use

The entire X-ray exam directly from the dental chair

Slim, simple, quiet

- Ultra compact design can fit next to the dental chair
- Quiet scanning reducing noise and stress
- Connects directly to the computer (USB connection)
- Can be operated in normal daylight environment

SPACE SAVING

QUIET SCANNING

DIRECT USB

Slim, space-saving design

Only 13 cm width

Fast and easy

- First image is ready to view in as little as eight seconds
- Scanner doesn't read if the plate is inserted upside down
- Plates are automatically erased after each scan
- Three scanning modes available to prioritize speed or resolution

Optimized workflow with no click

No need to open an acquisition interface to acquire image

Frequently Asked Questions (FAQ's)

Will the CS 7200 replace the CS 7600?

- **NO!** Both products are positioned differently, with different features and different pricing

Are the CS 7200 and CS 7600 plates interchangeable?

- **NO!** The CS 7200 uses new imaging plates that are specifically designed for the unit
 - The CS 7200 plates do not feature an embedded Scan & Go identification chip and thus, cannot be read by a CS 7600 scanner
 - Due to the Scan & Go chip, the CS 7600 plates are slightly thicker than the CS 7200 plates and cannot be inserted into the CS 7200 scanner

Are the hygienic sheaths for the CS 7200 similar to the ones for the CS 7600?

- **NO!** The CS 7200 uses new sheaths that are specifically designed for the unit
- The sheaths for the two products open on different sides

How does the image quality of the CS 7200 compare to the CS 7600?

- The image quality is comparable for both the CS 7200 and the CS 7600.
- Both systems offer a true resolution of up to 17 lp/mm, and deliver the same exposure range and contrast.
- Both products also feature similar plate technology and image processing.

Does the CS 7200 requires to open an acquisition interface module?

- **NO!** Users no longer have to open and close an image acquisition module in order to acquire an image, nor click on an acquisition icon.
 - Now, acquisition is always available when the imaging software is open.
 - After scanning a plate, images are displayed directly in the Imaging Software and ready for review.

How does the CS 7200 prevent cross-contamination?

Several components prevent cross-contamination, including:

- Plates use single-use disposable hygienic sheaths
- Removable mechanical parts that are engaged with the imaging plate can be cleaned
- Use a new hygienic sheath for each use
- Clean and disinfecting plates between each patients is also recommended (cleaning solution).

Can we use the CS 7200 centrally?

- **NO.** The CS 7200 is designed for chairside use, and should thus be paired with a dedicated workstation. Even if images can be sent through the network, the workflow would be ineffective if the scanner is used centrally.
- The CS 7600 is the appropriate solution for a central configuration

What positioning accessories can be used with the CS 7200 plates?

- Plates can be used the same positioning accessories as film
- Some manufacturers offer positioning devices that are better suited for imaging plates, such as plate holders designed to prevent damage to plates and punctures in hygienic sheaths.
- “Alligator clips” should not be used due to risk of damaging plate and/or hygienic sheath

Can the CS 7200 unit be installed with software other than Carestream's Dental imaging software?

- **YES.** TWAIN drivers are available for the CS 7200, which will allow users to review CS 7200 images within third-party, TWAIN-compliant software
- For more advanced software integration (SDK), please contact your Carestream representative or the Product Marketing department
